

SITH PERSUADER

A **lightsaber** is a fictional weapon in the *Star Wars* universe. It consists of a polished metal hilt which projects a blade of plasma about one meter long. The lightsaber is the signature weapon of the Jedi order and their Sith counterparts, both of whom can use them for offense, or to deflect blaster bolts. Its distinct appearance was created using rotoscoping for the original *Star Wars* films, and digitally for the prequel trilogy. The lightsaber first appeared in the original *Star Wars* film (1977) and every *Star Wars* movie to date (except *The Star Wars Holiday Special*) features at least one lightsaber duel. In 2008, a survey of approximately 2,000 film fans found it to be the most popular film weapon in history.

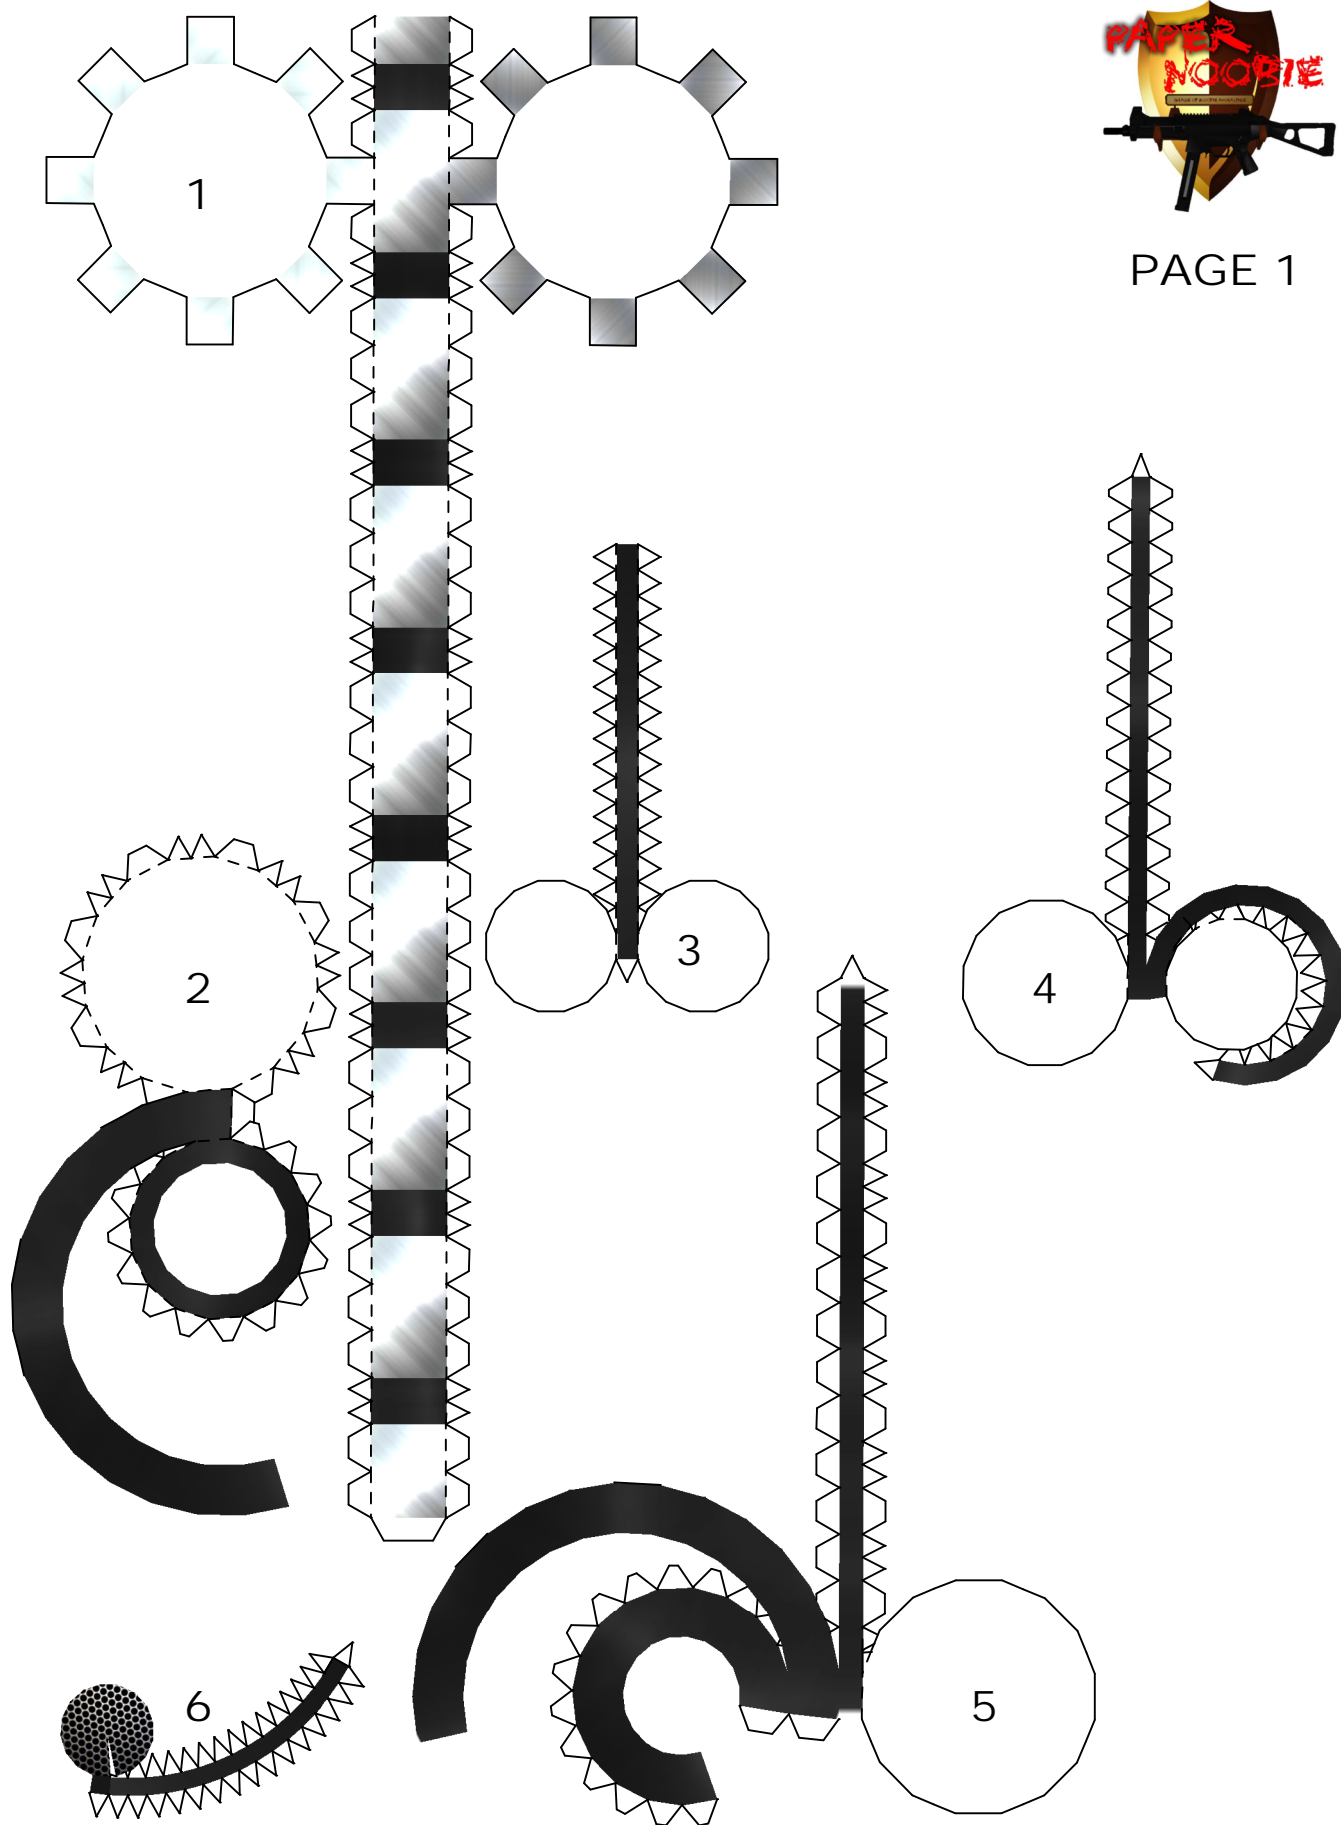

The lightsaber's blade cuts through most substances without resistance. It leaves cauterized wounds in flesh, but can be deflected by another lightsaber's blade, or by energy shields. Some exotic saber-proof materials have been introduced in the Expanded Universe. An active lightsaber gives off a distinctive hum, which rises in pitch and volume as the blade is moved rapidly through the air. Bringing the blade into contact with an object or another lightsaber's blade produces a loud crackle.

This papercraft is a reproduction of a custom saber built by **pneumoniaprone** and currently owned by **Darkantz MK-II**. Please enjoy this free papercraft
