

Start with either the upgraded back / top piece, or print out the black square

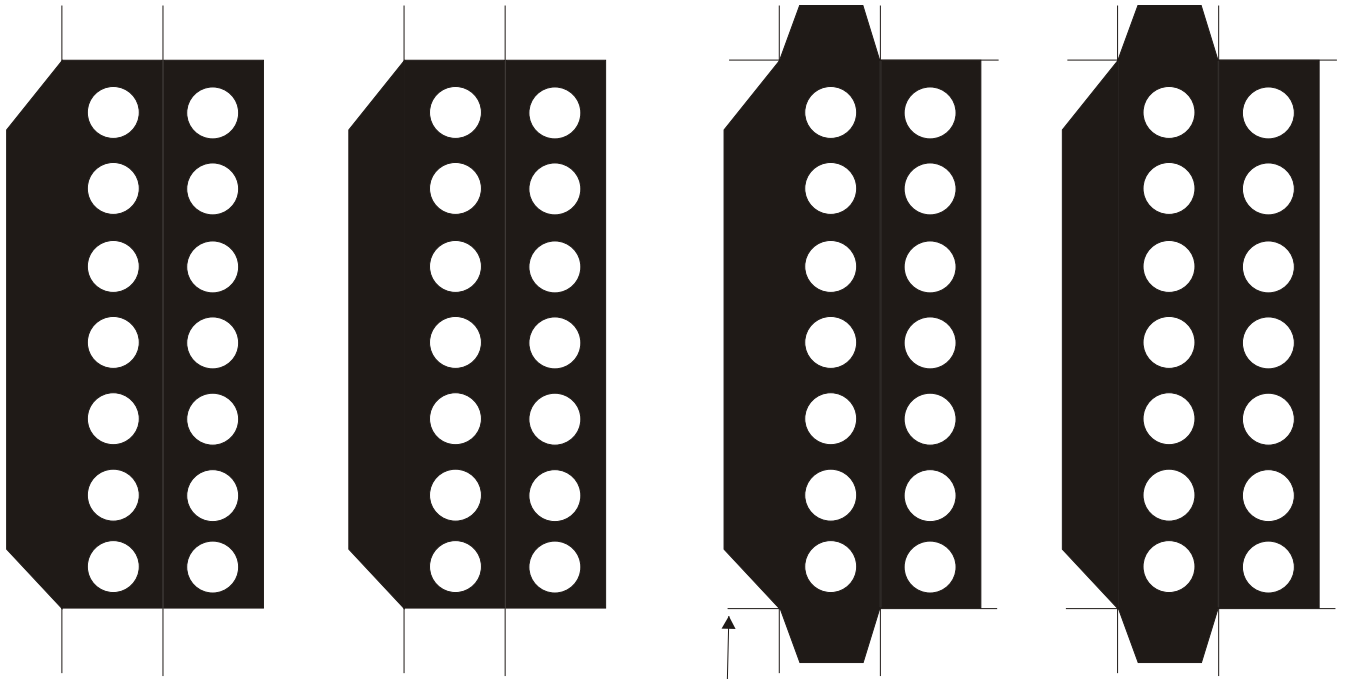

Use a single hole punch for the holes, you can glue together first, then punch out. Glue all 4 parts together then glue onto the roof, make sure it's lined up properly.

Again, use a hole punch for this, glue first....glue the tabs to the underside of the green piece, once that's done, you glue the spare tire to it.

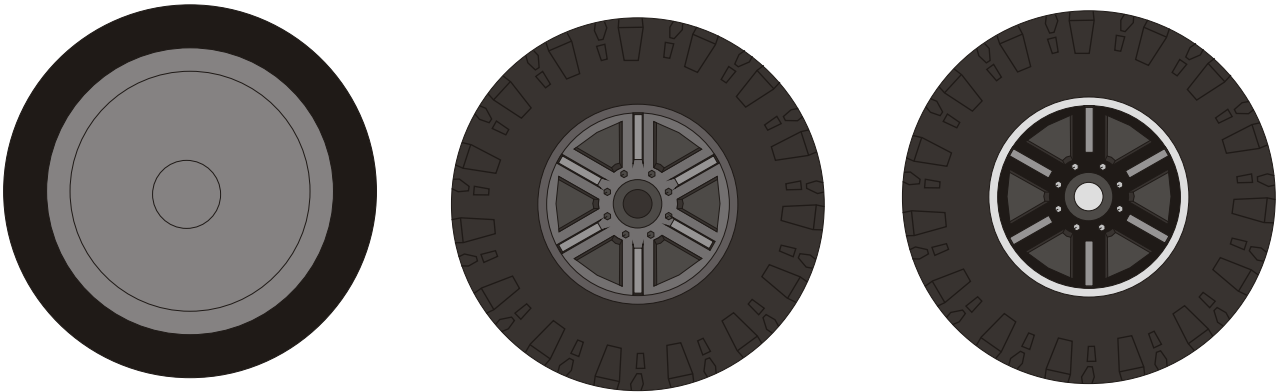

You can now glue the spare tire to the top, make sure it's centered

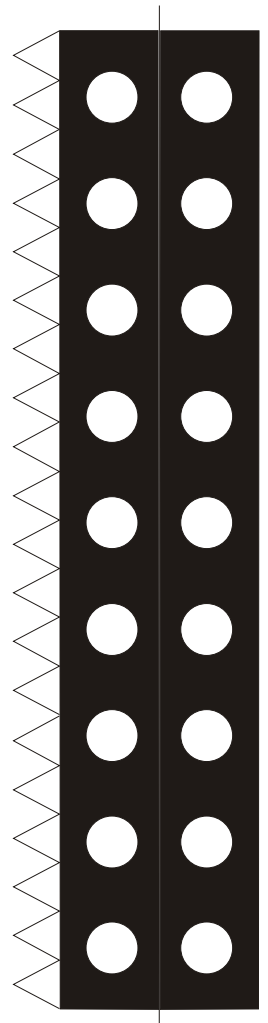

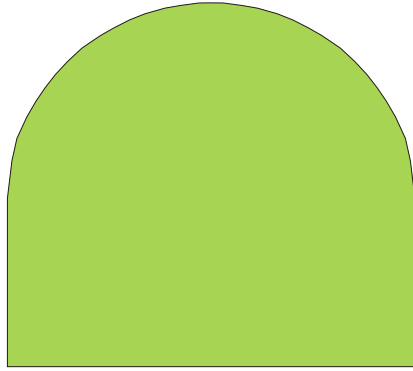

Use a single hole punch to punch out the holes, may need black marker for the white edges

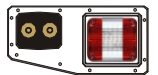

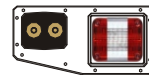

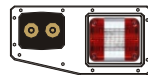

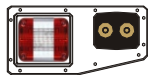

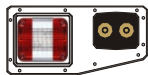

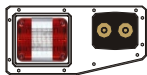

Score lines

Transformers 3 wheel

Print and glue this black piece in place if you've already built your model without it

Upgraded lights for the 1st Ratchet
